# TREMIX Spreader Waggon TV 830

When the going gets really tough, you want the best

# TV 830

- Provided with dust guards
- Contains up to 60 kg
- Link wheels allow lateral movement
- Distributes all kind of granolithic concrete material
- Screen roller presses the powder into the surface

TV 830	TECHNICAL DATA
Length	920 mm
Width	960 mm
Height, incl. handle	810 mm
Weight, empty machine	36 kg
Material quantity up to	60 kg

## TV 830

The Tremix spreader wagon TV830 ensures an even distribution of the Tremix Hardtopping granolithic concrete material. The TV 830 is of robust design and can be handled by one operator.

The Hardtopping material is distributed in batches, easily regulated from the handle.

The TV 830 is provided with a screen roller, width 830 mm, instead of wheels. It is therefore not necessary to use any wooden rails on the concrete surface.

The roller carries the weight of the machine at the same time as it presses the material on to the concrete surface.

The TV 830 is provided with link wheels that are lockable laterally in order to make it possible to move the machine longitudinally along the casting bays.

The receptacle for the Tremix Hardtopping material contains 2 bags and is provided with a knife. The TV 830 is provided with dust protection.

The Tremix Hardtopping material is spread on the still humid concrete surface.

The distribution is easily and evenly carried out with the Tremix spreader wagon TV 830.
